

Early French fries variety. In this maturity group the only one with the adaptability for cold storing (4°C). Excellent frying colour. Also suitable for the production of dehydrated potatoes. Resistant to PCV Ro1,4 and potato wart disease race 1; high resistance to tuber blight, common scab, Rhizoctonia and blackleg. Needs high nitrogen fertilizer.

Plant

Maturity Group	early
Plant Type	stem type
Growth Habit	semi upright
Colour of Flower	white
Foliage Development	rapid
Number of Tubers	medium
Dormancy	medium to high

Tuber Characteristics

Tuber Shape	long
Flesh Colour	light yellow
Eye Depth	shallow
Skin Colour	light yellow
Skin Characteristic	netted

Resistances

Potato Wart	Pathotype 1
Nematodes	Ro1,4
Leaf Blight	medium to high
Tuber Blight	high
Scab	high
Rhizoctonia	medium to high
Internal Rust Spot	medium to high
Bruising	high to medium
PVY	medium
Second growth	high

Yield and Quality

Market Outlet	French fries
Yield	high to medium
Share Oversize	high
Share Undersize	low
Discoloration Cooked	low
Discoloration Raw	low
Dry Matter	high (22 - 23 %)
