

NATASCHA is an early, high yielding cooking type B ware potato, with excellent taste. The variety has attractive long oval tubers with shallow eyes and super yellow skin- and flesh colour. NATASCHA is very resistant against Rhizoctonia, black leg and tuber rots.

Plant

Maturity Group	early
Plant Type	intermediate
Growth Habit	Semi - upright
Colour of Flower	white
Foliage Development	rapid
Number of Tubers	medium - high
Dormancy	medium - short

Tuber Characteristics

Tuber Shape	oval
Flesh Colour	yellow
Eye Depth	shallow
Skin Colour	yellow
Skin Characteristic	smooth

Resistances

Potato Wart	Pathotype 1 ¹⁾
Nematodes	Ro 1(8), 4(8)
Leaf Blight	medium - high
Tuber Blight	high
Scab	medium
Rhizoctonia	high
Black Leg	high
Internal Rust Spot	medium
Damages	medium
Bruising	high - very high
PVY	high

Yield and Quality

Market Outlet	ware potato, direct marketing, prepacking
Yield	high
Share Oversize	medium to low
Share Undersize	medium
Cooking Type	B
Discoloration Cooked	low
Discoloration Raw	very low - low
Dry Matter	low to medium (18%)

¹⁾ = was found to be resistant in one EU country
